

# ECE 208/408

# Impressionist Painting

# Classifier

Xiaoshan Liu, Danielle Williams

# Introduction

- People learn how to identify the creator of a painting through recognition of patterns in the brushwork, color palette, composition, and subject matter.
- ML algorithms does it's 'identification' based on pixel patterns and vectors.
  - It then assign labels to the elements that it detects based on its configuration.
- Project Aim
  - To conduct a comparative analysis on the performance of pre-trained CNN networks on classifying paintings and their respective artists.
    - ResNet18
    - ResNet34
    - VGG16
    - VGG19

# Method

- Data: Impressionist\_Classifier\_Data from Kaggle and Github
  - with 400 training images, 100 validation images and 70 test images respectively for each of the 10 artists.
- Preprocessing
  - transform
  - create dataloader
- Model configuration
  - loss: CrossEntropyLoss()
  - Optimizer: SGD
  - learning rate: 0.001
- Use Resnet and VGG

# Resnet

- Before:
  - The deeper the better
  - But vanishing gradient problem occurs when we stack too many layers
  - Not due to overfitting

# Properties of Resnet

- Proposed in 2015 by a Microsoft research team
- Skip connections

# Preliminary Results

# Confusion Matrix (training/validation) and accuracy (test) for pre-trained Resnet18

Accuracy of the network on the 714 test images: 79.97%

Confusion Matrix

```
-----
[[49  1  4  0  3  1  3  1  6  4]
 [ 0 60  2  1  0  0  1  1  4  3]
 [ 2  1 59  0  2  1  3  2  0  2]
 [ 0  0  2 58  1  2  2  2  2  3]
 [ 1  0  6  0 58  1  0  3  1  2]
 [ 0  1  0  8  1 50  8  0  2  2]
 [ 1  2  2  2  0  5 53  3  1  3]
 [ 0  0  1  0  1  2  0 65  2  1]
 [ 0  3  0  2  2  2  0 60  3]
 [ 0  2  2  0  2  0  0  0  1 59]]
```

# Confusion Matrix (training/validation) and accuracy (test) for pre-trained Resnet34

Accuracy of the network on the 714 test images: 80.39%

Confusion Matrix

```
-----
[[53  2  2  0  3  2  2  2  4  2]
 [ 1 59  0  0  1  0  0  5  5  1]
 [ 1  0 58  1  5  1  2  3  0  1]
 [ 0  1  1 61  2  2  1  2  2  0]
 [ 4  1  3  1 58  1  0  2  1  1]
 [ 0  0  0  6  1 54  4  2  3  2]
 [ 1  0  3  0  2  9 54  3  0  0]
 [ 0  0  1  0  1  3  0 65  2  0]
 [ 0  0  1  1  3  1  2  1 61  2]
 [ 1  3  2  0  3  0  3  0  3 51]]
```

# VGG

- VGG came as a result of the exploration of deeper CNNs
- It contains almost exclusively 3x3 convolutions
  - Smaller filters
    - Induced more non-linearity
      - More degrees of freedom for the network.
    - Limits the number of parameters.
  - Stacking layers enabled the network to see more:
    - With two, receptive field = 5x5
    - With three, receptive field = 7x7
  - Top-5 error on ImageNet database = 7.3%

# Compare

## Article

	VGG19	34 layer plain	34 Resnet
Properties	-Downsize the resolution -Increase filter -Lots of parameters, hence requires lots of computation -19.6billion floating points	-3.6 billion floating points -not much parameters per layer -less filters	-3.6 billion floating points -not much parameters per layer -less filters -add skip connections -output has to have the same size as input
Performance	middle	worse	best
Time	slowest	middle	fastest

## Our implementation

	VGG16	VGG19	Resnet18	Resnet 34
Accuracy On test data	76.33%	78.57%	79.97%	80.39%
Best Validation Accuracy	73.83%	76.56%	77.37%	77.68%
Training time	78m 57s	106m 1s	34m	38m
# of epochs	10	10	10	10

# Final Steps & Results

# Why do we choose Impressionist Artist?

# Train on another dataset

- Use Another dataset to train the model
  - 40 artist
  - 50 training images, 20 validation images for each artist
  
- Smaller dataset could still achieve good accuracy as long as the artist's style is well-distinguished from others
  - E.g. Monet 55.6% vs 69.4%
  - 5 artists from Renaissance achieved over 70% accuracy.

# VGG - Potential Application

# Conclusions & Future Applications

- Achieved relatively high accuracy in identifying paintings by different artists.
- Can be used for a variety of applications
  - Art authentication
  - Online Galleries
  - Historical research
  - Education
- Future research could focus on improving the model's performance, addressing the limitations and challenges, and expanding its applications.
  - For example, it could be interesting to apply similar techniques to other types of artwork, such as sculpture or architecture, or to study the evolution of artistic styles over time.
