

ECE 208: Project Presentation

Kevin Fobare, Ryan Pappania, Rodney Boone, Mukhtar
Suleman

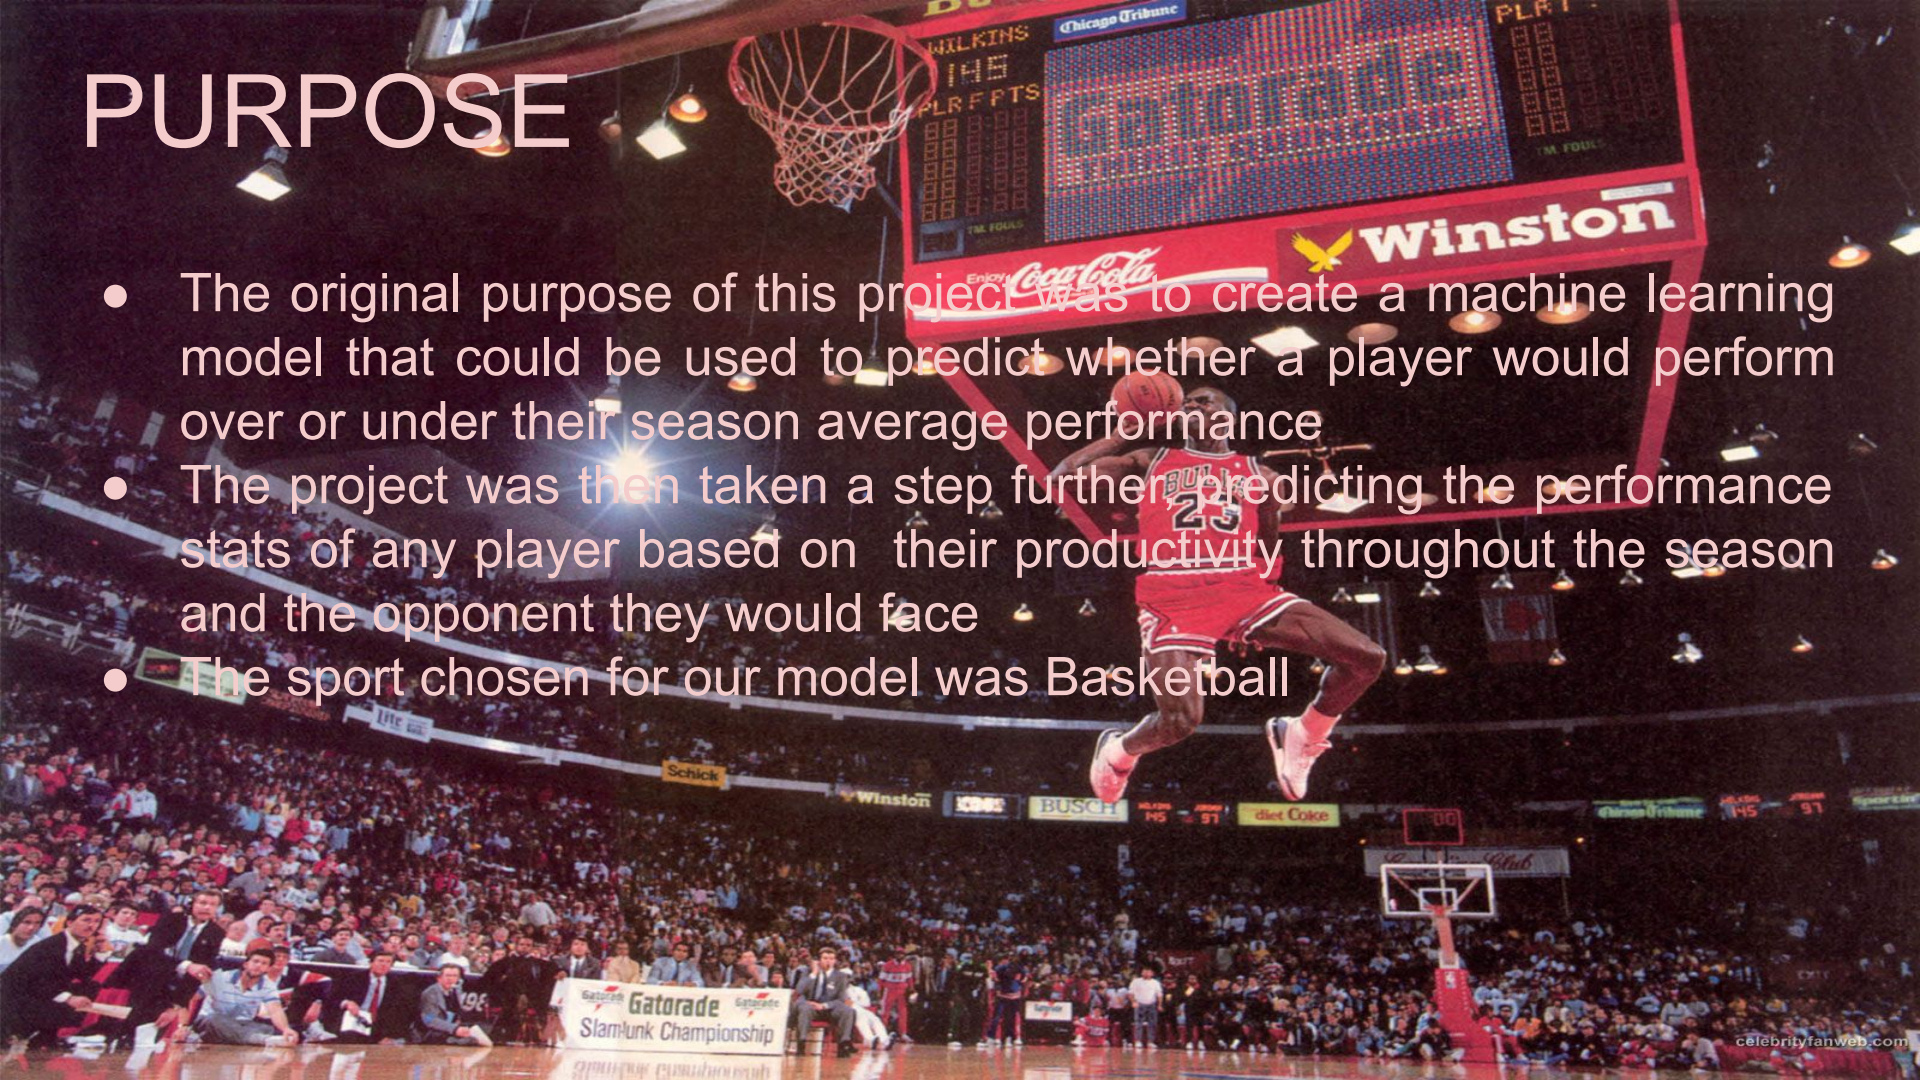

Presentation Overview

- Purpose
- Dataset Examples
- Approach
- Model description
- Loss function
- Issues
- Evaluations
- Results
- Summary

PURPOSE

- The original purpose of this project was to create a machine learning model that could be used to predict whether a player would perform over or under their season average performance
- The project was then taken a step further, predicting the performance stats of any player based on their productivity throughout the season and the opponent they would face
- The sport chosen for our model was Basketball

Dataset Player Example

| Rk | G | Date | Age | Tm | | Opp | | GS | MP | FG | FGA | FG% | 3P | 3PA | 3P% | FT | FTA | FT% | ORB | DRB | TRB | AST | STL | BLK | TOV | PF | PTS | GmSc | +/- | | | |

NBA Teams Defensive Stats

| NBA TEAM | PA/G | S/G | B/G | T/G | Defensive Efficiency | DRB |
|----------|-------|-----|-----|------|----------------------|------|
| ATL | 120.5 | 7.5 | 4.5 | 13.5 | 1.156 | 32.2 |
| BOS | 109.2 | 6.8 | 6.5 | 11.9 | 1.08 | 35.6 |
| BKN | 113.3 | 6.8 | 5.2 | 13.1 | 1.124 | 32.6 |
| CHA | 116.8 | 6.9 | 4.5 | 13.8 | 1.164 | 31 |
| CHI | 113.7 | 7.8 | 4.9 | 12.2 | 1.127 | 32.6 |
| CLE | 110.2 | 7.4 | 4.6 | 13.6 | 1.09 | 33.4 |
| DAL | 115.6 | 6.9 | 5 | 12.5 | 1.118 | 33.2 |
| DEN | 109.6 | 7.1 | 5.4 | 12.6 | 1.095 | 33.7 |
| DET | 119 | 6.5 | 4.7 | 15.2 | 1.151 | 32.8 |
| GSW | 115.2 | 7 | 4.6 | 14.3 | 1.116 | 34.6 |
| HOU | 113.2 | 7.8 | 4.6 | 12.7 | 1.096 | 34 |
| IND | 120.2 | 7.5 | 5.8 | 12.7 | 1.143 | 31.4 |
| LAC | 112.3 | 7.8 | 5 | 13.2 | 1.115 | 32.9 |
| LAL | 117.4 | 7.3 | 5.5 | 13.8 | 1.118 | 34.9 |
| MEM | 112.8 | 8.2 | 6.1 | 15.1 | 1.106 | 31.7 |
| MIA | 108.4 | 7.4 | 3.4 | 12.7 | 1.089 | 33 |
| MIL | 116.4 | 6.7 | 5 | 12.8 | 1.124 | 34.8 |
| MIN | 106.5 | 7.9 | 5.9 | 14.2 | 1.056 | 34.2 |
| NOP | 110.7 | 8.3 | 4.6 | 13.3 | 1.093 | 33.6 |
| NYK | 108.2 | 7.3 | 4.3 | 13.1 | 1.095 | 32.5 |
| OKC | 112.7 | 8.4 | 6.5 | 12.7 | 1.079 | 33.2 |
| ORL | 108.4 | 8.1 | 5.2 | 14.7 | 1.071 | 31.8 |
| PHI | 111.5 | 8.2 | 6 | 12 | 1.099 | 31.9 |
| PHX | 113.2 | 7.4 | 5.9 | 14.9 | 1.113 | 33.9 |
| POR | 115.4 | 7.6 | 4.3 | 15.2 | 1.133 | 30.1 |
| SAC | 114.8 | 7.7 | 4.2 | 13.1 | 1.114 | 33.2 |
| SAS | 118.6 | 7.1 | 6.3 | 15.1 | 1.13 | 33.9 |
| TOR | 118.8 | 7.7 | 4.7 | 14 | 1.151 | 31.8 |
| UTA | 120.5 | 6.5 | 5.6 | 15.7 | 1.163 | 33.2 |
| WAS | 123 | 7.6 | 5.1 | 14 | 1.161 | 31.9 |

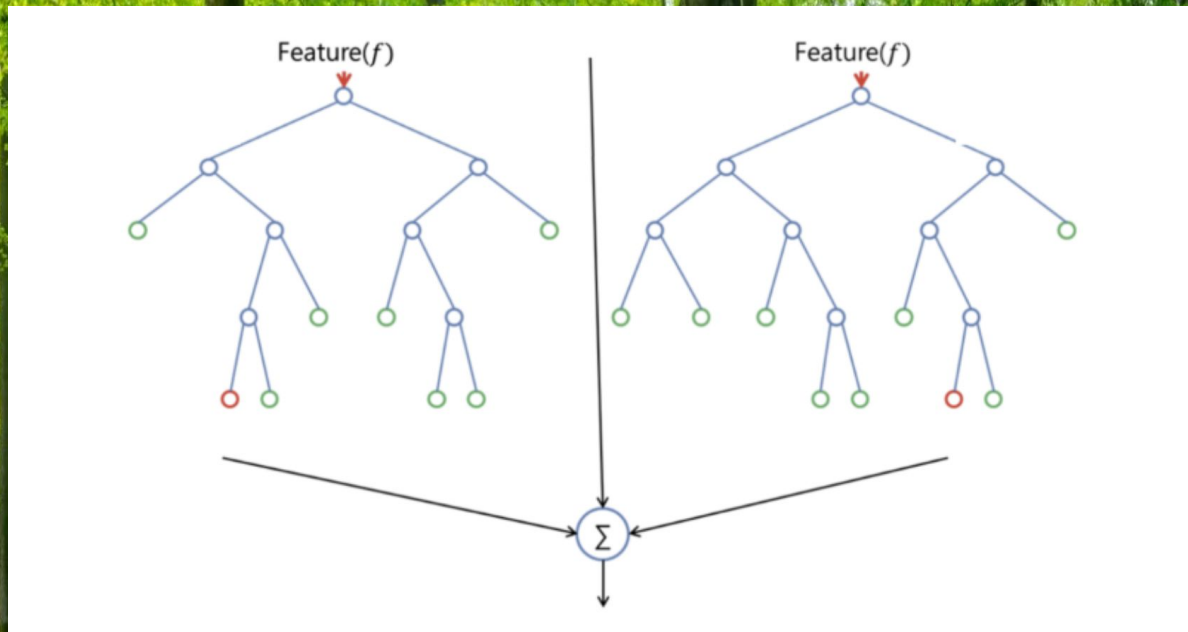

Approach

- We started out using the Linear regression model as a baseline for predicting whether a player would exceed or fall short of their season average
- Random Forest Model to predict a player performance stats individually based on their efficiency throughout their season and the opponent team
- We switched to the Random Forest Model because of the randomness it provides and additional stats we can add easily

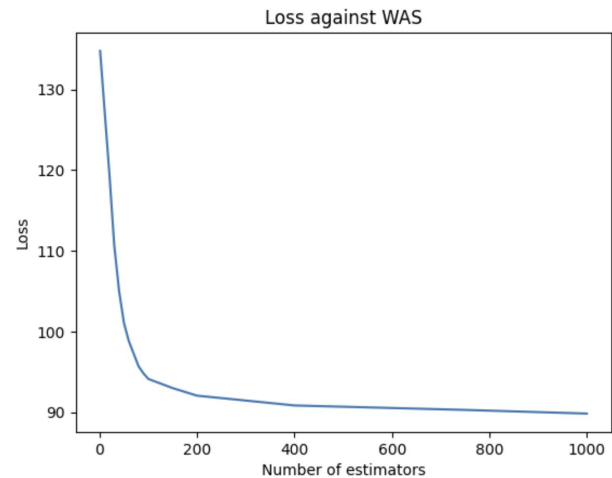

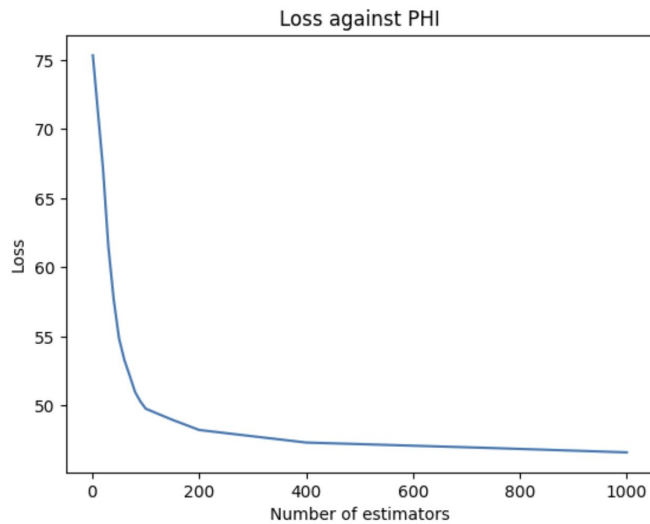

Random Forest Model

- Builds Multiple decision trees
- Chooses best feature from random subset of features
- Change number of estimators

Loss function

- Used Squared error
- Showed that around 300 estimators was the best balance between computation time and minimizing loss

Issues: Players are actual people

A players mood

City they are playing in

Game Pressure

Sickness

Attractive game viewers

Issue 2: Trading and Absences

Players being traded in the middle of the season.

Ex: Knicks trading key players halfway through season

Injuries and long term absences is missing data

Issue 3: Bench player

Data does not incorporate a player's rest per game

Bench player may sub in during playoff/overtime to save energy of starters

Assumes no bench players have to replace injured player

Evaluation

Linear Regression with
no opponent data

Random Forest Model
with opponent defensive data

Results

N-estimators = 100

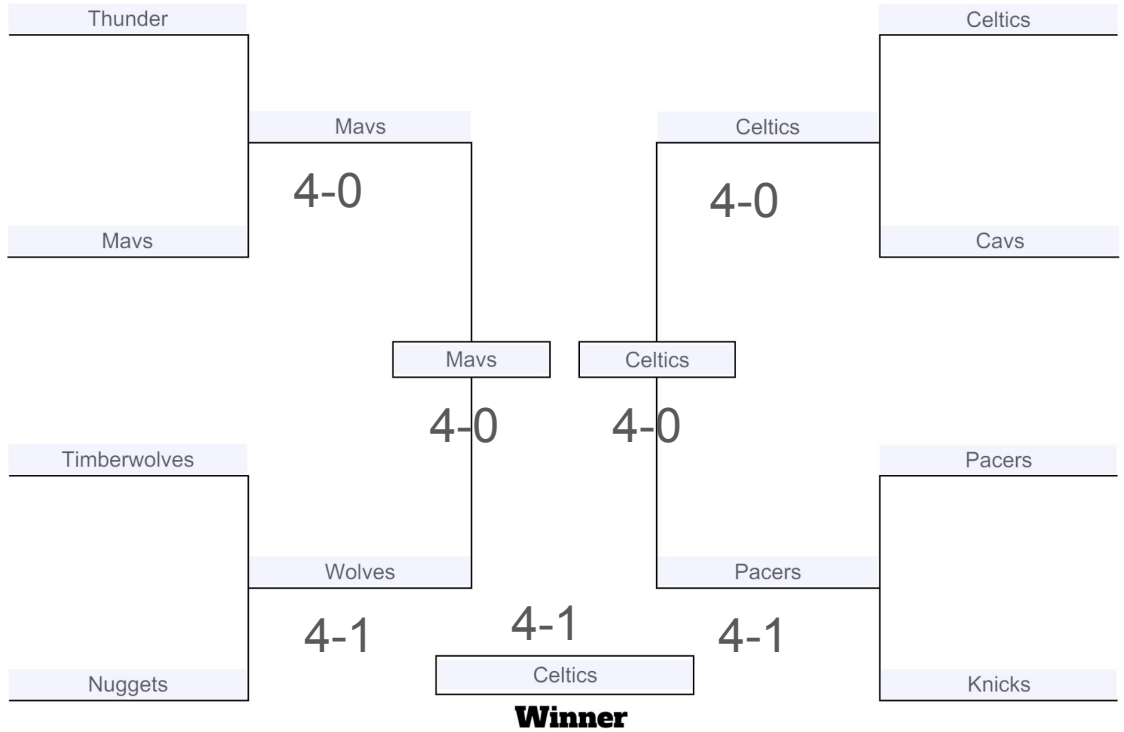

Used starting 5,

Results: either sweep or losing team picked up one game

Big gap in points per game

NBA 2024 Playoffs

Game Results

Mavericks

doncic.csv against BOS: 35

kyrie.csv against BOS: 24

jonesjr.csv against BOS: 5

washington.csv against BOS: 15

gafford.csv against BOS: 5

Total: 84

Celtics

jrue.csv against DAL: 12

white.csv against DAL: 14

brown.csv against DAL: 30

tatum.csv against DAL: 34

porzingis.csv against DAL: 21

Total: 111

- Celtics have best starting 5 players
- On paper this team should win the playoffs/finals with full sweeps

Results

N - estimator = 100

1 bench player

1 point win games

Finals Prediction Match up

N - estimator = 300

(best estimator)

1 bench player

Most accurate representation

Most tiebreakers

(close)

NBA 2024 Playoffs

Our finals championship prediction is...

vs

DALLAS MAVERICKS

strus.csv against DAL: 15

mobley.csv against DAL: 13

allen.csv against DAL: 21

levert.csv against DAL: 17

Total: 108

Summary

- This model could be incorporated into any sport as long as the player's performance metrics can be measured and the opposing teams stats as well
- The more viable data there is, the more accurate the results
